

Use this sheet to record your results. Write down the number of stars you counted during each of your 5 observations.

Remember:

- Give your eyes a few minutes to adjust to the darkness before you start counting.
- Keep your tube as still as you can when counting.
- Try to find 5 different parts of the night sky that are free of clouds.

Observation	Number of Stars
Observation 1	
Observation 2	
Observation 3	
Observation 4	
Observation 5	

How many did you count altogether?  
Add up the total number of stars you counted during the 5 observations.

Total =

**[Enter your total on The Schools' Observatory website](https://www.schoolsobservatory.org) to find out how many stars were visible across the entire night sky. The information you give us helps astronomers monitor light pollution across the UK!**
